

## Matrix Reference Cables

### Loudspeaker Cable

The Matrix Reference Loudspeaker cable is based on high quality pure silver and silver-gold conductors. The pure silver-gold conductors are made of very pure silver with a small injection of 24k gold. The quality of this silver-gold metallurgy is unchallenged. Also do silver and silver-gold conductors improve over time, where copper conductors degrade over time. Moreover silver is the best electrical conductor of all metals.

The conductors are treated with the Advanced Core Treatment 1.0 (ACT-1.0) and the insulator is carefully picked, so the pure silver conductors and the insulator make a perfect match. Flexible tubing is surrounding the conductors, which is fitted with high quality chromed metal casings. This cable is terminated with high quality silvered copper spades.

All this leads to a clear and very revealing cable, with lots of definition and an open and wide stereo image. This loudspeaker cable is handcrafted with expertise and dedication. No excess decoration and unnecessary complexity, make this cable true value for your money and without a doubt the best loudspeaker cable in its price league.

Type:	KLC-MR-1a
Standard length:	2 m
Minimum length:	2 m
Options:	Also available as Bi-wire (KLC-MR-BW-1a) Also available as Jumpers (KJC-MR-1a/2a)
Connection types:	Spade, Banana

### Interconnect Cable

The Matrix Reference Interconnect cable is based on high quality pure silver-gold conductors. These pure silver-gold conductors are made of very pure silver with a small injection of 24k gold. The quality of this silver-gold metallurgy is unchallenged. Also do silver-gold conductors improve over time, where copper conductors degrade over time.

To protect the signal from unwanted external electromagnetic interference, the conductors are placed behind a very effective silvered copper shielding. This interconnect cable is terminated with high quality RCA plugs of a special non-magnetic copper alloy with 24k gold plating or silvered XLR plugs. These high-quality plugs are carefully picked, so the pure silver-gold conductors and the plugs make a perfect match.

The Matrix Reference Interconnect cable is handcrafted with expertise and dedication. No excess decoration and unnecessary complexity make this cable true value for your money and without a doubt the best interconnect cable in its price-league.

Type:	KIC-MR-1a / KDC-MR-1a
Standard length:	1 m
Minimum length:	1 m
Options:	Analog with RCA / XLR plugs Digital with RCA / XLR / BNC plugs

### Power Cable

The Matrix Reference Power cable is based on heavy gauge stranded copper conductors. These conductors are positioned in a unique crossed quad formation. This crossed quad formation is a low-noise construction which leads to effective passive filtering of unwanted high frequency electrical interference. This makes your installation reveal a very clean sound and a clear picture.

The conductors are also placed behind shielding, protecting them from electromagnetic interference. This power cable is terminated with high quality gold plated plugs of carefully selected materials for superior sound quality, durability and reliability.

All this leads to a very clear and revealing cable, which gives your installation a sense of quietness and ease, but yet with lots of dynamics, power and an open and wide stereo image. Kharma power cables can be one of your most important components upgrades.

Type:	KPC-MR-1a
Standard length:	2 m
Minimum length:	2 m
Options:	US, Schuko, IEC, IEC HC
